DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-4, drawn to a protein composition, classified in class 530, subclass 350.
- II. Claims 5-6, drawn to a method for modulating somatolactogenic function, classified in class 530, subclass 399.
- III. Claims 7-8, drawn to a method of inhibiting Nb2 cells, classified in class 435, subclass 40.51.
- IV. Claims 9-10, drawn to a method for diagnosing disease, classified in class 435, subclass 4.

The inventions are distinct, each from the other because of the following reasons:

The inventions of groups I, II, III, and IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP 806.04, MPEP 808.01). In the instant application, the different inventions have different functions. The invention of group I functions as a protein composition. The invention of group II functions to modulate somatolactogenic function. The invention of group III functions to inhibit Nb2 cells. The invention of group IV functions to diagnose disease.

Art Unit: 1654

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirements be traversed. See 37 CFR 1.143.
